Tamime Kaddour

Art Director & Graphic Designer

— ABOUT —

Designing with Purpose, clear & lasting identities that resonate.

I'm a graphic designer and visual creator based in Algiers with more than a decade of experience across branding, digital design, and visual communication.

My work focuses on creating clear and effective visual identities while exploring new creative tools and techniques. From traditional graphic design to motion, 3D, and AI-assisted creation, I enjoy building visual systems that are both meaningful and visually refined.

Curiosity and experimentation are central to my process. I believe strong design emerges from understanding real needs and translating them into thoughtful visual solutions.

— SERVICES —

What i do & How i do It

Three disciplines, one principle: every visual should earn its place and leave a mark.

01. Bold Branding & Visual Identity

Building timeless brands with sharp logos, cohesive guidelines, and strong visual storytelling that connect instantly.

02. Design Digital & Interfacesv

Designing smooth, modern, and human-centered experiences across apps, websites, and social content.

03. 3D, Animation & Motion

From motion graphics and editing to 3D worlds and experimental tools — pushing ideas beyond static design.

01

BRAND & VISUAL IDENTITY

Marks that outlast trends. Systems built for recognition, not decoration — from strategy to final guidelines.

02

MOTION & VIDEO

Giving static ideas a heartbeat. Motion graphics, brand films, and video editing that amplify the message.

03

3D & VISUALIZATION

Spaces and objects before they exist. From product renders to architectural visualization and event stands.

04

DIGITAL & UI DESIGN

Screens that feel considered. Web mockups, app interfaces, and digital content systems built for clarity.

05

ART DIRECTION

Curating the vision, not just executing it. Creative oversight across campaigns, stands, and brand worlds.

06

PHOTOGRAPHY & AI

Light and generation as design tools. Product, architectural, and experimental imagery with AI-assisted workflows.
